Greg, putting you in the loop.

All I know is Drew is from Louisiana and is doing a documentary on the oil spill, and was interested in talking with someone in EPA about dispersants off camera. Chris and Ben asked me to speak with him; they could better explain the context of what he is doing and who he is.

I just gave him a lay person overview of dispersant ecotox, explained that other Agencies deal with worker safety issues of dispersants, cleared up some of his misconceptions about how dispersants are listed (not approved) by EPA, and what are some of the tradeoffs considered in spill response. I also told him that the intention of aspects of the proposed new rule for Subpart J were to list less toxic and more effective dispersants, which was a big concern of his. He seemed to be happy and more informed.

He asked if I would send him some links to dispersant information.

Can I send him the attached? It is public domain already, as I presented it to the US Coast Guard a month ago, and it is posted on a NOAA Sea Grant site (not sure where).

He is visiting DC right now, and asked if there was someone he could interview on camera.

His email is Ex. 6 Personal Privacy (PP) cell Ex. 6 Personal Privacy (PP)

Sincerely,  
Mace
